

# Agriculture Leadership Award 2008

*conferred upon*

## Jain Irrigation Systems Limited

With a passion to serve the farmers and with an answer to the irrigation problem of the country, Jain Irrigation Systems Ltd, the pioneers of micro irrigation concept in India, is the only manufacturer of complete drip irrigation systems in the world. Their presence in the agriculture scene goes well beyond developing products and extends to empowering farmers with information, innovations, training and technologies. JISL has taken the benefits of micro-irrigation and precision farming to the farms by deploying huge field force to promote water management technologies, thus saving water and improving farm quality and yields.

The concept of precision farming in Indian agriculture scene was introduced by this company, which since then has traveled a long path, working closely with the Governments in policies related to micro-irrigation. Globally, the second largest micro-irrigation company, JISL has contributed to the quality and productivity improvement in major crops, through water management and precision farming systems. Working on the integrated model from technology and inputs to processing, the company has beautifully crafted the concept and set up Plastic Park, Agri Park and Food Park at Jain Fields, Jain Hills and Jain Valley, where thousands of farmers and extension workers take training every year on scientific farming and precision agriculture.
